  C. Cataloging Notes
II. Survey Contents by Issuer

INTRODUCTION

What is a numismatic (exonumia) encased item?

Numismatic encased items that have been cataloged here are all coins encased by pressure in a machine made for this purpose.

Historically, it seems that the first encased cents were a product of the Pan American Exposition in 1901 (30 types), although pieces have been noted with a patent date as early as April 11, 1899.

The encasements are usually made of aluminum, but sometimes they are found in copper, brass, silver, plastic wood, celluloid badges, bottle caps, mirror backs, buttons, and paper (cardboard).

The encasement shape is usually round or horseshoe, but bell, pot, bear, wineglass, bread, pan, wishbone, and square are known.

The coins in the encasement are usually cents, but all current U.S. denominations have been encased. The rarest seems to be the fifty cent followed by the dollar, quarter, dime, and nickel. One unusual piece is known with one half an indian head cent.

World Fairs & Expositions generated many issues of these items. Many pieces were issued as store cards (advertising pieces). Very often they carry a good luck message in symbols or inscription.

Foreign coins have also been encased. Canadian (large and small cents), German, English, French, Spanish, Mexican, Swiss, Swedish, Dutch, Danish, Italian, Austrian, Israeli, and Panamanian pieces have been issued.

Fascinating collections can be made by area, date, event, denomination, shape, etc.

A C K N O W L E D G M E N T S

I would like to thank the following for their contribution to this "Encased Item" section of this survey. Richard Crosby, Ferd Wise, John Manko, Fred Verzellesi, Bernie Frajoli, Joel Reznick, Larry Dziubek, Glenn Mooney, Jim Kriss, Rodger Hershey, Dick Watley, Cliff Sutton, N. Graver, Herman Aqua, and the Western Pennsylvania Numismatic Society members in general.

Mr. Richard Gaetano

Cataloger

C A T A L O G I N G N O T E S

A. Encased Items as a group are classed as store cards (advertising pieces). The company promotion side is then taken as the obverse.

B. Measurements are of the maximum dimension. A horseshoe encasement is measured from its peak to a line connecting the two ends.

C. Descriptions
   1. Descriptions (inscriptions) are to be as close as possible within word processing limits. Spacing may be indicative.
   2. Inscriptions are read as complete phrase lines from top to bottom of item.
   3. Slashes are added to indicate phrase line break. A double slash indicates a change of layout, type, etc. in the following line.
   4. Lower case letters are used in cataloger supplied descriptive inserts. These descriptions are inclosed in parenthesis. Descriptive inserts are not used to describe devices if the device is visible on an accompanying photo. A hole is indicated only if die punched in original manufacture.

WESTERN PENNSYLVANIA NUMISMATIC SOCIETY - NUMISMATIC SURVEY OF ALLEGHENY COUNTY, PA.

D E D I C A T I O N

This survey is dedicated to the continuation of the spirit of Numismatics in the Western Pennsylvania area. This spirit was exemplified at the initiation of this Survey by the "Carnegie Museum Section of Coins and Medals" and was personified at that time by the curator Mr. William Woodside. The above used The Western Pennsylvania Numismatic Society as a tool to influence for the betterment of individuals in numismatics. Converging lines of such influence developed in many other local clubs and were fostered by our local coin dealers. The result was the development of a body of knowledgeable and in some cases well known numismatists. These individuals were strong in their support of other collectors, their many fields and levels of interest, intertwined with numismatics. Interests developed from the study and collecting of numismatic and associated items have added much to the quality of life in this area.

William V. Hunter, Jr.

I N T R O D U C T I O N

Allegheny County is rich in numismatic (exonumic) history. While no U.S. mints were located within the county, many pieces were privately struck within its boundaries to commemorate events both at home and elsewhere in the world. Items were struck elsewhere to commemorate events within the borders of the county, the stage for many historical occurrences along its three main rivers - the Allegheny, Monongahela, and the Ohio. The sites of Braddock's defeat and the whiskey rebellion, Forts Duquesne and Pitt, parts of the National Road, the Pennsylvania Turnpike, and the modern city of Pittsburgh, with its Golden Triangle, are but a few of the points of historical interest recorded or commemorated on numismatic items. The area was the strength of our countries industrial society and as such supported the production of "numismatic" associated items.

While such well-known personages as Washington, Bouquet, and Carnegie are easily associated with the county, it is perhaps also significant to know that John Eckert, a Pittsburgh butcher, Richard and William Jenkinson, tobacconists, Henry Miner, a book seller, and similar small businessmen not only lived in the county but also issued numismatic items.

These numismatic items are and will be (probably for centuries) found as objects of curiosity and a starting point for rediscovering some of the life of past times. It has been deemed worthwhile to capture data currently available that relates to Allegheny Counties numismatically related items. A wealth of material available in private collections, the papers which have been presented to the WPNS, specialized literature which has been published, the availability of the Carnegie Museum collections, and the abundance of (perishable) knowledge of society members made The Survey seem appropriate.

Glenn A. Mooney

6/30/86

WESTERN PENNSYLVANIA NUMISMATIC SOCIETY - NUMISMATIC SURVEY OF ALLEGHENY COUNTY, PA.

D E V E L O P M E N T

The "W.P.N.S. Numismatic Survey of Allegheny County" was conceived and originally issued as a computer listing of many tokens and medals issued in, for, or relating to Allegheny County, Pennsylvania. It was a "Catalogue of Allegheny County, Pennsylvania Numismatic Items". Listed data was basically of the items housed in the Carnegie Museums "Section of Coins and Medals". This original issue contained an alphabetic index by actual inscription on the listed items -a novel idea. The information was pulled together and expanded on by workers in this worthy section supported by the Western Pennsylvania Numismatic Society. Data was maintained on 80 column keypunched cards. Bill Hunter did the programming, card file ordering and maintenance, and list production on large mainframe computers. The project instigator was Mr. William W. Woodside (Curator -Section of Coins and Medals). Glenn Mooney, Bill Woodside, Ray Byrne, Ferd Wise, Ed Oschman collected item information using special survey forms. Glenn Mooney presented the project to the Western Pennsylvania Numismatic Society. The Society and its members have supported the survey to the present time.

For many years data was accumulated. Information was presented by members of the W.P.N.S. and a few others. The 80 column card concept quickly became too cumbersome. Data was then typed and collected with photos in a format that was expected to be made print ready. However the result, because of data collection techniques, the availability of so much data, the scope and size of the task, etc. - was that the Survey became an ordered but not presentable collection of data. A giant step was taken in initiating computerized word processing.

Finally, a subgroup of the survey -Encased Items- was adopted by Dick Gaetano to be made available in printed form. The result is the first issue Section "Special Groups -Encased Items".

D I R E C T I O N

This "Numismatic Survey of Allegheny County, Pa." is to be as titled. It will make an attempt to track numismatics and related interests thru time - The collections (public, private), the organizations (manufacturers, clubs), the people involved (students, dealers, and collectors).

The cataloguer is requesting organization histories. Biographies and autobiographies of individuals as they refer to "Survey" interests are actively solicited. Hopefully all individuals -known or little known- will respond who have participated strongly.

History and trends should be a part of the survey. National and State bank development should be chronicled. Artistic level and reasoning for item output trends should be commented on.

The item catalog will be the large part of the catalog. An individual numismatically related item is a curiosity that prods investigative persons to delve into its background. They are often the longest lasting reference to persons, places, and things. Such items grouped in categories will suggest directions and give much key information

concerning place and time for further local studies. Current items present the opportunity to collect a body of information as it happens, providing historical starting points for the future. This survey should have current relevance locally, with special interest groups, and with collectors of such items. Several of the item groups currently have catalogs and a known group of followers (parking tokens, transportation tokens, etc.). We must also acknowledge the surveys interest to individuals who have had such items passed to them as keepsakes and to that group of "knowledgeables" who can identify these keepsakes. The survey should provide a starting point for scholars and students of history, economics, etc.

Items are categorized in the hope that specific areas will be studied printed, and issued. A current general "Survey" introduction and index will accompany each issued section. An attempt will be made to continue indexing by item inscriptions. Perhaps "The Survey" will provide guidelines, etc. for groups in other areas.
Collection of item data is to continue. An honest effort will be made to keep information accurate, ordered, and reasonably presentable. Word processing tools will be a tremendous aid. Handling of photos and other data physically disconnected from the data catalog will continue to be a problem. However when the item is not available, a photo is the best alternative for accurate item description. A highly coordinated effort, though, is required to carry photos through to a finished printed output. Any data presented to the cataloguer will be respectfully treated and hopefully properly acknowledged.
